

Eesti psühholoogia laias maailmas 2007

Kõik paistab nüüd lõpuks jälle korras olevat. Eesti psühholoogia jõudis 2007. aastal välja sellele tasemele, mida ennustas selle sajandi algusaastate kasv: *PsycINFO*-s indekseeritud ajakirjades ja raamatutes ilmus 89 artiklit (84 ajakirja artiklit ja 5 raamatut või selle peatükki), mille autoritel on märgitud Eesti aadress (joonis 1).

Joonis 1. Eesti autorlusega artiklid andmebaasis *PsycINFO*

Kõik 89 tööd on toodud selle artikli lisa täpselt nii, nagu neile on viidatud andmebaasis. Vähemalt üks töö on sattunud nimekirja tüüpilise vea tulemusel. Bradley jt. (2007) üks kaasautoritest Aklilu Kidanu töötab andmebaasi kohaselt sellises toredas kohas nagu Miz-Hasab Research Center, Addis Ababa, Estonia!

Uurides autoreid tekib mulje, et teaduslik viljakus on ajas vähemuutuv omadus. Produktiivsuse pingerea tipus on ikka samad nimed, kes on seal olnud eelmistelgi aastatel (Jüri Allik, Jaanus Harro ja Talis Bachmann), kes kolme peale kokku on avaldanud 20% kõigist artiklitest.

Kõige populaarsemad teemad 2007. aastal olid kultuuride vahelised erinevused (8), keel (6), isiksuse omadused, (6), akadeemiline võimekus (5), kognitiivsed võimed (5), epidemioloogia (5), suremus (5), vere liistakud (4), geenid (4) ja HIV (4). Suurim arv artikleid ilmus ajakirja *Psychological Research/Psychologische Forschung* (5) erinumbris, mille toimetajaks oli Talis Bachmann. Teised populaarsed ajakirjad olid *Behavioural Brain Research* (4), *European Journal of Personality* (4), *European Journal of Public Health* (3), *International Journal of Bilingual Education and Bilingualism* (3) ja *Integrative Psychological & Behavioral Science* (3), mille toimetajaks on Jaan Valsiner.

Kõige kiiremat vastukaja 2007. aastal ilmunud tööde seas on tekitanud Mällo, Alttoa jt. (2007) artikkel ajakirjas *Behavioural Brain Research*, mida 12. detsembri seisuga oli tsiteeritud

14 korda. Üksteist korda oli tsiteeritud ka Schmitt jt. (2007) tööd, mis võrdleb 56 maa isiksuse omadusi ja 10 korda Peeter Jaansonini osalusel kirjutatud tööd, mis näitas serotoniini geeni polümorfismi ja perfenasiini antipsühhootilise toime omavahelist interaktsiooni. Mitmel muul viisil silma hakkavaid töid on teisigi, näiteks ajakirjanduseski kajastamist leidnud Tõnis Timmuski osaluselt tehtud töö, mis leidis kromosoomis 2p12 geeni, mis reguleerib korruga skisofreeniat ja käelisust (Francks jt. 2007). Või siis Tarmo Strenze (2007) meta-analüüs selle kohta, kuidas vaimne võimekus on seotud sotsiaal-majandusliku staatusega. See artikkel oli paar kuud ajakirja *Intelligence* kõige loetavamaks artiklik.

Lõpuks traditsiooniline võrdlus meie naabriga. Lõuna suunas räägib kõik meie kasuks. Läti osalusena oli 2007. aastal *PsycINFO*-s 11 artiklit ja Leedul 39 artiklit. Selleks, et ennast Soomega võrreldavaks muuta on veel pikk tee minna. 2007. aastal ilmus Soome autorlusega 961 artiklit või raamatut, mis *PsycINFO*-s äramärkimist leidsid. Rahva arvu erinevust arvestades on meie mahajäämus Soomest umbes kaks ja pool korda. Kümme aastat tagasi oli mahajäämus Soomest vähemalt kaks-kolm korda suurem. Ja järgmisest aastast läheb asi veelgi paremaks, sest meil õnnestus endale saada nende esinumber Risto Näätänen.
